DETAILED ACTION

Response to Amendment

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).
4. Claims 1 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Sukharev et al., U.S. Patent 6,147,012.
5. Pertaining to claims 1 Sukharev discloses a semiconductor process as claimed. See **sole figure**, where Sukharev teaches a method for forming an interlayer dielectric layer, comprising the steps of:

Art Unit: 2823

a) setting an active matrix (it is well known in the art that a large number of transistors having source/drains as active regions form an active matrix) on a substrate in a chamber (not shown);

b) spraying a silicon source material and a hydrogen peroxide (H_2O_2) in a gaseous state on the active matrix (column 4, lines 7-23) at a temperature ranging from approximately $-20^{\circ}C$ to approximately $600^{\circ}C$; and

c) forming an interlayer dielectric layer on the active matrix by condensation reaction of the silicon source material and hydrogen peroxide (H_2O_2) without performing a post thermal treatment (column 5, line 45).

6. Pertaining to claim 7, Sukharev discloses the method as recited in claim 1, wherein a pressure in the chamber ranges from approximately 1 Torr to approximately 2 Torr (column 5, line 44).

Objections

7. Claims 2, 3, 4, 5 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
